

117. New technique to fabricate direct resin pattern of custom-made posts

Dr. MOHAMED ABDELMAGEED AWAD, Dr. HAIFA SALEH ABDULGHAFFAR

Faculty of Dentistry, King Abdulaziz University Jeddah, Saudi Arabia

Quick fabrication and exact fitting of custom-made post are the aim of fixed prosthodontic clinicians. Fabricating the resin pattern in vivo by addition technique using brush may lose time and effort to the dentist.

A simple technique is described to facilitate fabrication of custom made post quickly and easily. This is achieved by using special gun to insert the resin material into the post space.
